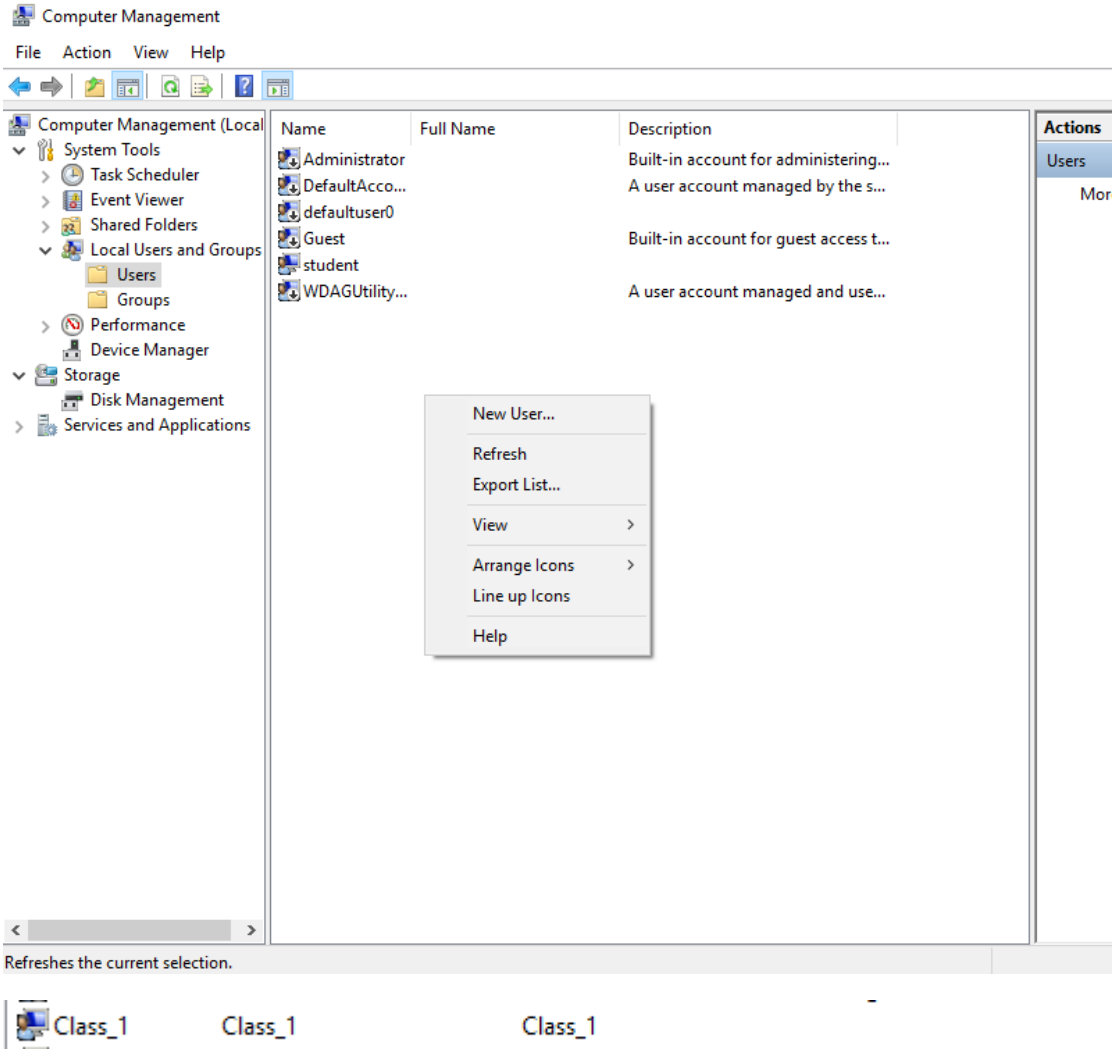
1. Add a new standard user named “Class_1” including the description and full name.

The user must change the password at next logon



2. Complete the following parts about the user “Class_1” from the previous exercise.

• Verify if the profile folder exists.

• Log in as “Class_1”.

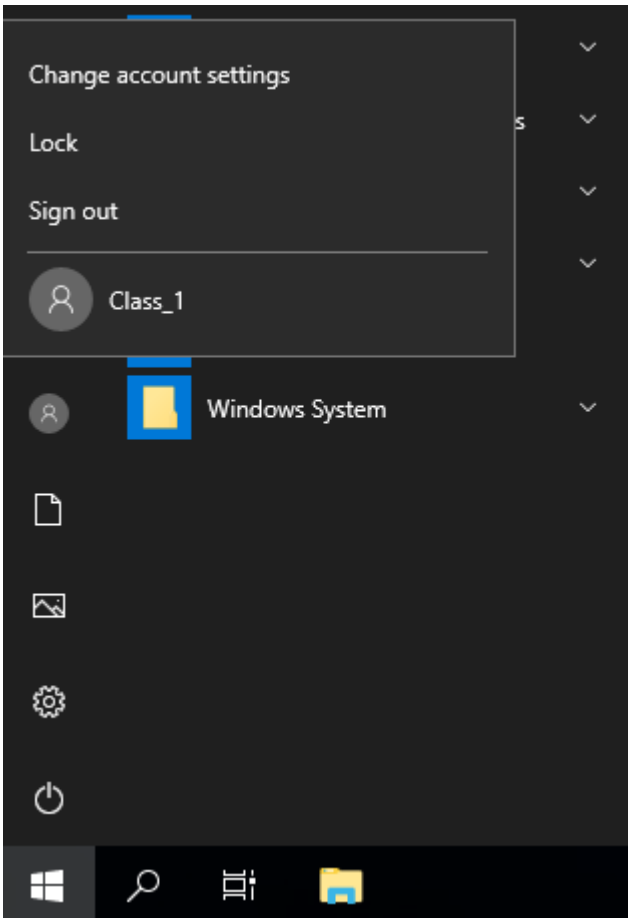
• Verify if the profile folder now exists.

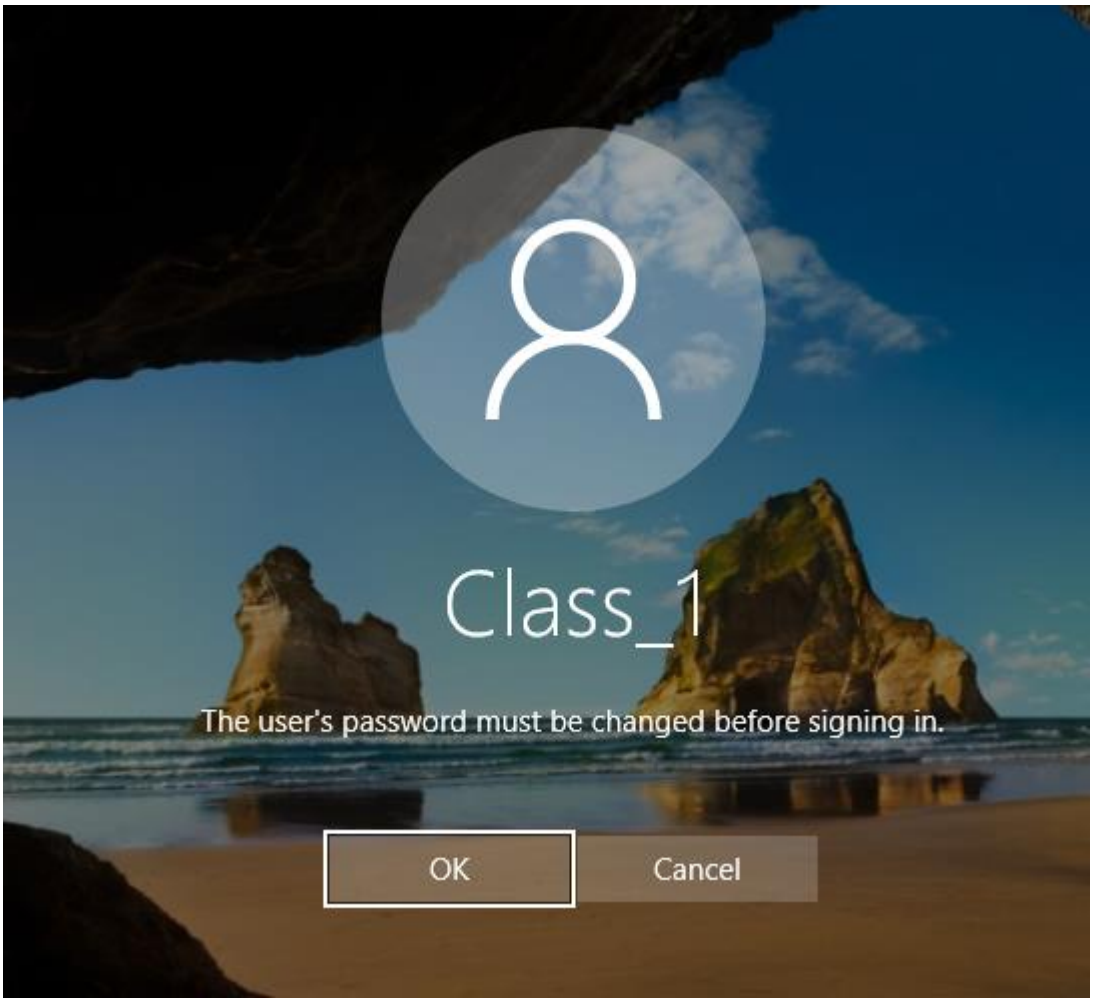
• Add a second hard drive to the virtual machine and create a folder called

“My Documents” in F:\

• Move “Class_1” Documents folder to the directory you have just created.

• Open “Documents” shortcut and create a new folder. Check if this folder has actually been created in “F:\My Documents”.





Class_1
The user's password must be changed before signing in.

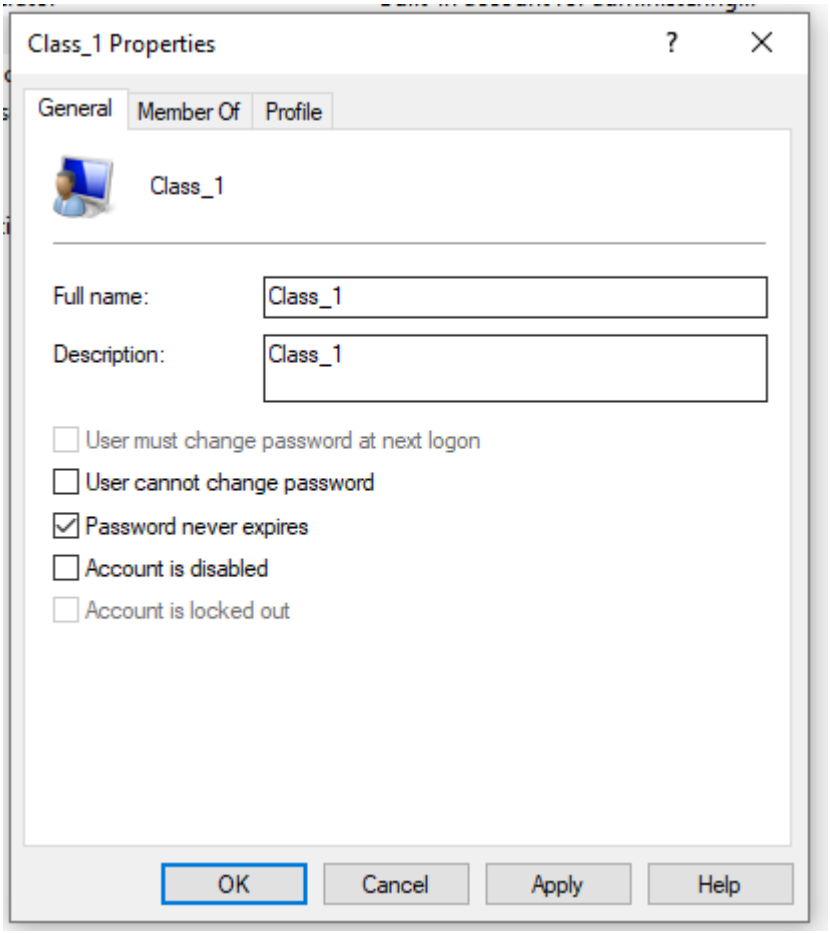
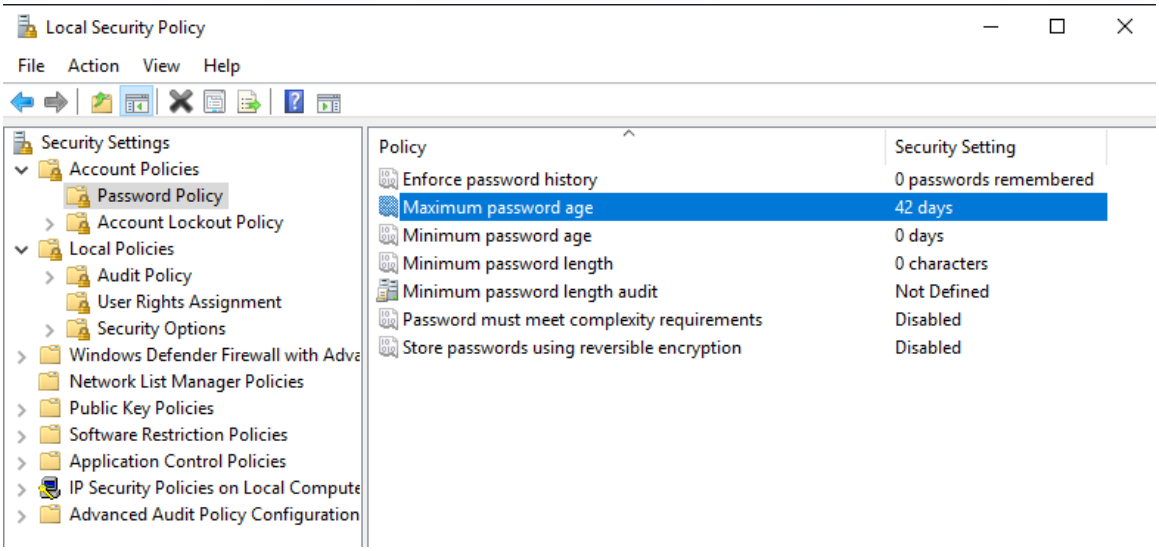
4. How do you configure a specific user so that the password never expires? How can you configure this policy for everyone?





5. When can you use a locked account?

We can wait until the user automatically unlocks (if the locked state is temporally) or go to the user properties with the administrator account and deselect account locked checkbox.

6. Imagine you define an “Account lockout threshold” of 3 and “Account lockout duration” of 5. What would be the valid values of “Reset account lockout counter after”? What if “Account lockout threshold” value was 0?

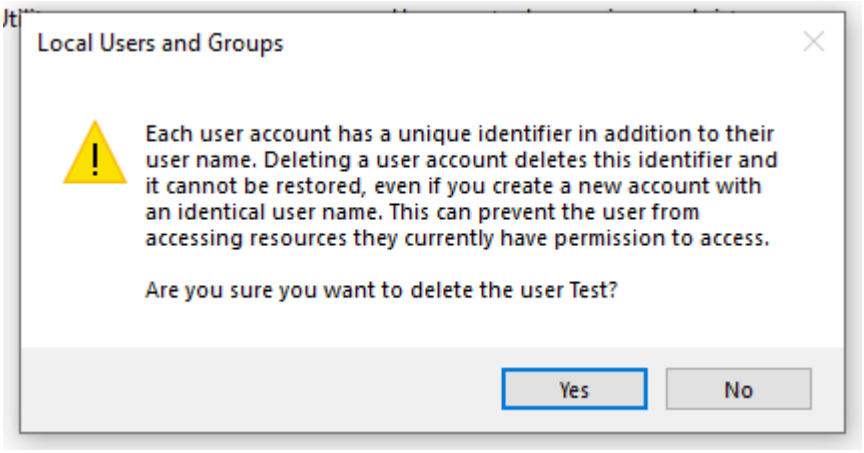
Help



Local Users and Groups
Each user account has a unique identifier in addition to their user name. Deleting a user account deletes this identifier and it cannot be restored, even if you create a new account with an identical user name. This can prevent the user from accessing resources they currently have permission to access.
Are you sure you want to delete the user Test?
Yes
No
